

MOHAMMED AJMAL

Undergraduate Software Engineer

Colombo, Sri Lanka | 078-567-9294 | mohammed.ajmall944@gmail.com | linkedin.com/in/mohammedajmal

PROFESSIONAL SUMMARY

Detail-oriented undergraduate Software Engineering student with a strong foundation in both full-stack development and AI and Machine Learning concepts. Proficient in Python, JavaScript, and Java, with experience building and contributing to real-world applications. Familiar with the Software Development Life Cycle (SDLC), object-oriented design, and software best practices. Eager to contribute to cross-functional teams, continuously adapt to emerging technologies, and grow professionally within a software engineering environment.

TECHNICAL SKILLS

Programming Languages:	Python, JavaScript, Java, HTML, CSS
Frameworks:	React, FastAPI
Tools & Platforms:	Git, GitHub, VS Code, REST APIs
AI & Machine Learning:	scikit-learn, GLiNER (NER), TensorFlow/Keras (familiarity)
Soft Skills:	Attention to Detail, Critical Thinking, Problem-Solving, Written & Verbal Communication, Proactive Learning, Self-Directed

PROJECTS

UniFlowHub - Startup Application

January 2025 - Present | Colombo, Sri Lanka

- Assisted in designing and executing test cases for an AI-driven model including Optical Character Recognition (OCR) and Named Entity Recognition (NER), supporting functional and regression testing efforts based on system requirements.
- Participated in development discussions and collaborative code reviews within an Agile Scrum framework.
- Followed software development best practices, writing clean and maintainable code while contributing to full-stack features of the application.

React-Based Project - Ecommerce Website

June 2026 | Colombo, Sri Lanka

- Built a full-stack e-commerce platform with React and Express/SQLite, implementing RESTful APIs and a decoupled frontend-backend architecture via Vite's reverse proxy.
- Wrote component and unit tests using Vitest and React Testing Library, mocking HTTP calls to validate UI rendering, user interactions, and utility logic in isolation.
- Managed asynchronous state across a multi-page app and chatbot interface using React hooks, with intentional UI feedback patterns reflecting transparent, user-centred design principles.

FastAPI / Streamlit Project - Authenticated Media Sharing App

June 2026 | Colombo, Sri Lanka

- Built a full-stack platform with a FastAPI backend and Streamlit frontend, designing REST API endpoints for uploading images, browsing a live feed, and managing posts, while using asynchronous programming to keep the codebase fast and easy to maintain.
- Engineered a database layer using SQLAlchemy, defining structured data models with unique identifiers, table relationships, and foreign key constraints, along with optimized queries for fast and reliable data retrieval across all endpoints.
- Implemented a complete authentication system using JWT tokens with five auth flows (registration, login, verification, password reset, and profile management), enforced user-level access control so users can only delete their own content, and integrated ImageKit CDN for media storage, file uploads, and image and video transformations.

Web Development Project - Prototype Website

April 2025 | IIT Sri Lanka

- Developed responsive website prototype using HTML, CSS, and JavaScript with collaborative team of 4+ members.
- Conducted HTML validation across assigned pages and produced formal technical documentation detailing structural findings and improvements.

RAG-Based Information Extraction Project

August 2025 | IIT Sri Lanka

- Designed and implemented RAG-based model for intelligent file processing and specific information extraction
- Applied core machine learning concepts such as vector embeddings and similarity search to design an intelligent file processing system.

Graph Algorithms Project

March 2026 | IIT Sri Lanka

- Engineered algorithm for parsing adjacency list graphs and validating graph acyclicity using Python.
- Developed 30+ comprehensive unit test cases validating algorithm correctness, edge case handling, and boundary conditions
- Identified basic scenarios suitable for automation as a learning exercise in supporting automation efforts.

EDUCATION

Informatics Institute of Technology (IIT) - Sri Lanka

2024 - Present | IIT Sri Lanka | Undergraduate Software Engineer

1st Year:

Module	Mark
Mathematics for Computing	84
Software Development 2	72
Web Design & Development	57
Software Development 1	56
Trends in Computer Science	47
Computer System Fundamentals	39

2nd Year:

Module	Mark
Database Systems	89
Software Development Group Project	72
Object Oriented Programming	68
Software Engineering Principles & Practice	48
Machine Learning & Data Mining	90
Algorithms, Theory & Design	72

AI & Machine Learning Short Course

May 2025 | Specialized training in artificial intelligence model development and deployment | Mark: 74

AI Noor International School - Kingdom of Bahrain

2010 - 2024 | Secondary Education | Cambridge UK Curriculum

ALResults:

Subject	Grades
Mathematics:	A
Physics:	A
Chemistry:	B

AS Results:

Subject	Grades
Mathematics:	B
Physics:	B
Chemistry:	C

CERTIFICATIONS AND ACHIEVEMENTS

- Artificial Intelligence Short Course - Informatics Institute of Technology (2025)
- GRO Football Academy Participant - Kingdom of Bahrain (2025)
- 1st Place Winner - GRO Summers Cup Football Tournament (2025)
